

W00/compound 9: per-site observed ligand-residue minimum distances

Inclusive radii 3.5, 4.0 (primary), 4.5, 5.0 Å. Grey cells: >5.0 Å. † partial residue (declared missing or zero-occupancy atom); * positive fractional occupancy, unweighted; alt = separate local conformer.

NUDT14 (PDB 8OTV, assembly 1) rows with any retained pair ≤5.0 Å			NUDT5 (PDB 8RIY, assembly 1) rows with any retained pair ≤5.0 Å

Minimum observed heavy-atom distance (Å)

8OTV:model1:C:A:301: 447 residue-conformer rows, 23 null/refused (not plotted; not no-contact); alternates >5.0 Å: chain B/B Leu47 (label 48) alt A 14.19 Å, chain B/B Leu47 (label 48) alt B 13.23 Å

8OTV:model1:F:B:302: 447 residue-conformer rows, 23 null/refused (not plotted; not no-contact); alternates >5.0 Å: chain B/B Leu47 (label 48) alt A 27.48 Å, chain B/B Leu47 (label 48) alt B 27.48 Å

8RIY:model1:C:AAA:301: 418 residue-conformer rows, 31 null/refused (not plotted; not no-contact)

8RIY:model1:D:BBB:301: 418 residue-conformer rows, 31 null/refused (not plotted; not no-contact)

Retained deposited heavy atoms only; minimum distance is descriptive geometry, not binding energy, affinity, hydrogen-bond proof, selectivity or causality. Missing/zero-occupancy atoms are not imputed, so values cannot exclude closer absent atoms. Coordinate uncertainty is not propagated. The four crystal sites are not independent samples; NUDT5 and NUDT14 residue axes are target-specific and are not homology-aligned.
